OCTOBER 19-22, 2008

SAFE • ENERGY EFFICIENT • SIMPLE & FLEXIBLE

WE ARE CURRENTLY INSTALLING  
DEWATERING EQUIPMENT FOR ROYAL  
DUTCH SHELL IN PEACE RIVER CANADA.

At DryVac Services Canada we pride ourselves on providing value to clients by improving handling of aqueous products and creating value, typically; water and solids for reuse. Our state-of-the-art equipment can recover liquid components including heavy oil, solvents, fruit juices, vegetable oils and the like. DryVac Services Canada strives to reduce operating costs through performance, equipment quality, reduction of processing steps and waste handling. Our offices in Alberta are continuing operations in Canada while preparing to handle an influx of new business in international markets. Our engineering and management team is continually looking at new processing industries and areas to see how we can provide more efficient results. Solid materials can in some cases provide value as well; Bio solids from organic waste, materials (which are suitable for fertilizer or biomass fuel), metal hydroxides, pigments, stock for fiberboard, roadbed material, etc. We look forward to helping you with your remediation needs.
